STUDENT ADMISSION ENQUIRY FORM

Design and Implementation of a Student Admission Enquiry Management Application

Name: Akshaya S **Roll Number:** 241401009

Experiment / Project: Student Admission Enquiry Form

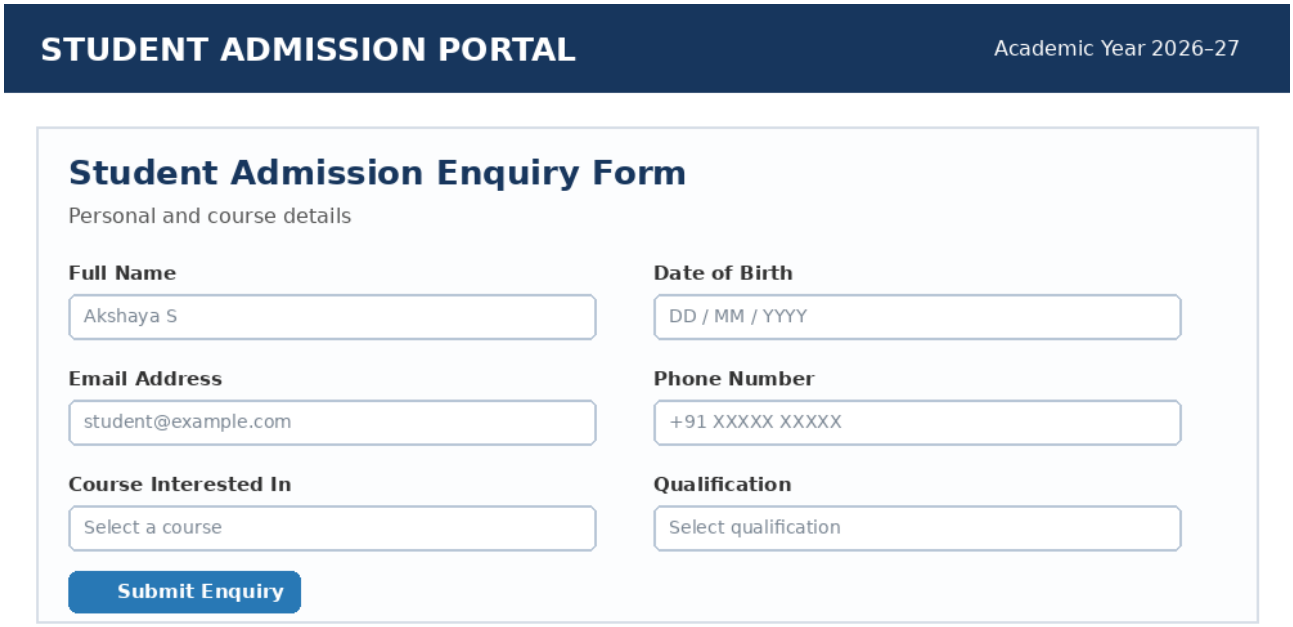

Figure 1: Illustrative student admission enquiry form interface

Aim

To design a simple student admission enquiry form that collects prospective students' personal details, academic background and course preferences in a structured format, and supports organized enquiry tracking and follow-up.

Objectives

- To create a clear and user-friendly admission enquiry form.
- To collect contact, qualification and preferred-course details in a consistent structure.
- To organize submitted enquiries for review and follow-up.
- To display enquiry records through a dashboard or report.
- To support responsible handling of student information.

Software / Tools Required

• Web browser and internet connection
• Zoho Creator or a similar low-code application platform
• Student Admission Enquiry application
• Form builder, report builder and dashboard components

Introduction / Theory

A student admission enquiry form is used by an educational institution to gather initial information from prospective students. Instead of collecting details through scattered messages or paper notes, a structured form stores information in consistent fields that can be reviewed and followed up efficiently.

Key Concepts

Concept	Description
Student Enquiry	A request for information about admission, courses, eligibility, fees or the application process.
Form Fields	Input fields such as name, contact details, qualification and course of interest.
Enquiry Report	A structured list of submitted enquiries that staff can search, review and update.
Dashboard	A summary view showing enquiry totals, application progress and recent records.
Follow-up Status	A label such as New Enquiry, Contacted, Under Review or Completed.

Application Specifications

Parameter	Detail
Application Name	Student Admission Enquiry
Form Name	Student_Admission_Enquiry_Form
Report Name	Student_Admission_Enquiry_Report
Main Fields	Name, date of birth, email, phone, address, qualification, preferred course, year of admission, message
Status Values	New Enquiry, Contacted, Under Review, Completed

Procedure

1. Open the application platform and create a new application named Student Admission Enquiry.
2. Create a form named Student_Admission_Enquiry_Form.
3. Add fields for the student's name, contact details, qualification, preferred course, admission year and enquiry message.
4. Mark essential fields as required and use suitable field types such as email, phone, date and dropdown.
5. Save the form and preview it to verify that the labels and input fields are clear.

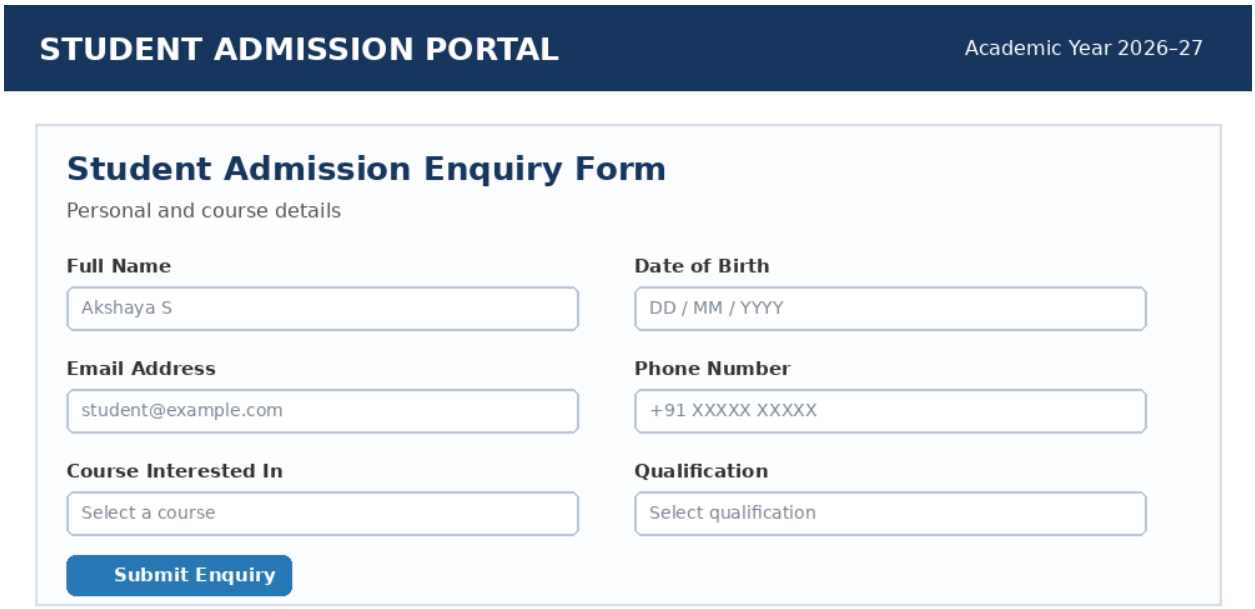

Figure 2: Example form layout and student details

6. Create a report named Student_Admission_Enquiry_Report to display submitted enquiries.
7. Add a status field so staff can record whether an enquiry is new, contacted, under review or completed.
8. Create a dashboard with enquiry totals and a list of recent records.
9. Test the form with sample data and verify that the submitted details appear correctly in the report.

Enquiry Report and Dashboard

The report provides a central view of submitted enquiries. Staff can use it to review contact details, identify the course a student is interested in and track the next follow-up action. A dashboard can summarize enquiry activity for quick review.

Data Handling and Follow-up

Each enquiry should be reviewed by authorized staff and used only for the admission-related purpose for which it was collected. Contact information should be kept accurate, access should be limited to staff who need it, and records should be updated when follow-up is completed.

Suggested Enquiry Workflow

Stage	Action
1. Submission	Student enters the required details and submits the enquiry.
2. Review	Admission staff checks the submitted details for completeness.
3. Contact	Staff contacts the student and shares relevant course or admission information.
4. Update	The enquiry status is updated in the report.
5. Closure	The enquiry is marked completed when no further follow-up is needed.

Result

A student admission enquiry form layout, report structure and dashboard concept were prepared. The form fields and follow-up workflow provide a structured way to record and review prospective student enquiries.

Conclusion

The Student Admission Enquiry Form helps collect prospective students' details in a consistent and organized manner. By connecting the form with an enquiry report and dashboard, an institution can review requests, track follow-up progress and handle admission enquiries more efficiently.
