Data Modelling and Form Design for a Student Admission Application in Zoho Creator

17th August 2026

AKSHAYA S
B.Tech CSBS

AIM

To design and build a functional “Student Admission” application in Zoho Creator that demonstrates the correct usage of Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, and Radio — and to model the underlying data structure of a student admission workflow through a properly configured form, an auto-generated report view, and an Entity-Relationship (ER) diagram.

PROCEDURE

1. Application and Form Creation

- Logged into Zoho Creator and created a new application named “Student Admission”.
- Inside the application, opened the Form Builder and created the Student Admission Form, which holds all fields required for the admission intake process.
- This automatically created a linked report, All Student Admissions, which lists every submitted application.

2. Drag-and-Drop of Basic Fields

In the Form Builder, the Basic Fields palette was expanded on the left panel. Each required field was dragged from the palette and dropped onto the canvas in the order needed, then configured through its Field Properties panel, as listed below.

Basic Field	Field Name Set	Drag-and-Drop Configuration
Name	Name	Dropped onto canvas; enabled First Name / Last Name sub-fields; Last Name display kept; marked as containing personal data (PII).
Email	Email	Dropped below Name; built-in email format validation left active.
Address	Address	Dropped after Email; default Residential Address, City, State, Pincode sub-fields kept.
Phone	Phone	Dropped after Address; country code format set to India (+91).
Single Line	Guardian Name	Used as a short free-text field to capture the applicant's guardian name.

24140009

Basic Field	Field Name Set	Drag-and-Drop Configuration
Multi Line	Additional Remarks	Expanded text area for any additional notes from the applicant.
Number	Class XII Percentage	Plain numeric entry field for the qualifying percentage.
Date	Date of Birth	Standard date picker for the applicant's date of birth.
Time	Preferred Time	Standard time picker for the preferred counselling slot.
Drop Down	Preferred Course	Choice list populated with course options such as Computer Science.
Radio	Gender	Mutually exclusive choice options: Male, Female, Others.

3. Configuring Field Properties

- Selected the Name field and enabled the Last Name display option under Display Fields, in addition to the default First Name sub-field.
- Marked the Name field's Data Privacy section as Contains personal data (PII), since applicant names are personally identifiable.
- Reviewed the Field name and Field link name for the Name field to confirm both were set consistently to "Name".
- Confirmed the Address field's default Residential Address, City, State, and Pincode sub-fields render correctly on the live form.

4. Submitting a Sample Record and Reviewing the Report

- Filled and submitted a sample admission record through the live form to generate report data for "AKSHAYA S".
- Opened the All Student Admissions report in list view and confirmed the record appears with Name, Email, Address, Phone, and Guardian Name columns visible, showing "Showing 1 of 1" records.
- Opened the record individually and verified that every field — Address, Phone, Guardian Name, Date of Birth, Preferred Course, and Gender — correctly stored and displayed the submitted values.

5. Data Modelling

An Entity-Relationship diagram was designed to document the data model underlying the application. The central ADMISSION entity was linked to STUDENT, GUARDIAN, EMAIL, ADDRESS, PHONE, INTEREST_AREA, PREFERRED_COURSE, COUNSELLING_TIME_SLOT, GENDER, and TERMS entities, with a junction entity, ADMISSION_INTEREST, used to resolve the many-to-many relationship between ADMISSION and INTEREST_AREA.

OUTPUT

The following screenshots capture the completed application: the Form Builder showing the Name field configuration, the All Student Admissions report in both grid and detail view, and the ER diagram documenting the underlying data model.

RESULT

A fully functional Student Admission application was successfully designed and built in Zoho Creator using the required Basic Fields. The Student Admission Form correctly captures applicant details across Name, Email, Address, Phone, Guardian Name, and other data-type fields, the auto-generated All Student Admissions report accurately reflects the submitted record, and the accompanying ER diagram confirms that the underlying data model correctly represents the relationships between students, their admissions, and related reference data.
