Building Forms, Reports, Dashboards, and Custom Pages for Student Admissions

Student Admission Enquiry Form — Reporting & Dashboard Use Case

Akshaya S
Roll Number: 241401009

1. Aim

To build a Student Admission Enquiry Form in Zoho Creator to collect prospective students' personal details, contact information, preferred course, previous qualification, and enquiry status. The application also includes report views and a custom admissions dashboard to help the admissions team review enquiries, plan follow-ups, and monitor course-wise interest.

The solution replaces scattered enquiry notes with a structured digital form and organised views. It supports consistent data entry, faster retrieval of student enquiries, and a clear overview of admission activity.

2. Procedure

Step 1: Create the enquiry form. Create a form named Student_Admission_Enquiry in Zoho Creator and add fields for Student Name, Date of Birth, Email Address, Phone Number, Address, Last Qualification, Course Interested In, Enquiry Date, and Enquiry Status.

Step 2: Configure field properties. Mark essential fields as mandatory, choose suitable field types, and provide dropdown choices for course, qualification, and enquiry status.

Step 3: Add validation. Configure required-field checks and appropriate email and phone input validation to reduce incomplete or invalid submissions.

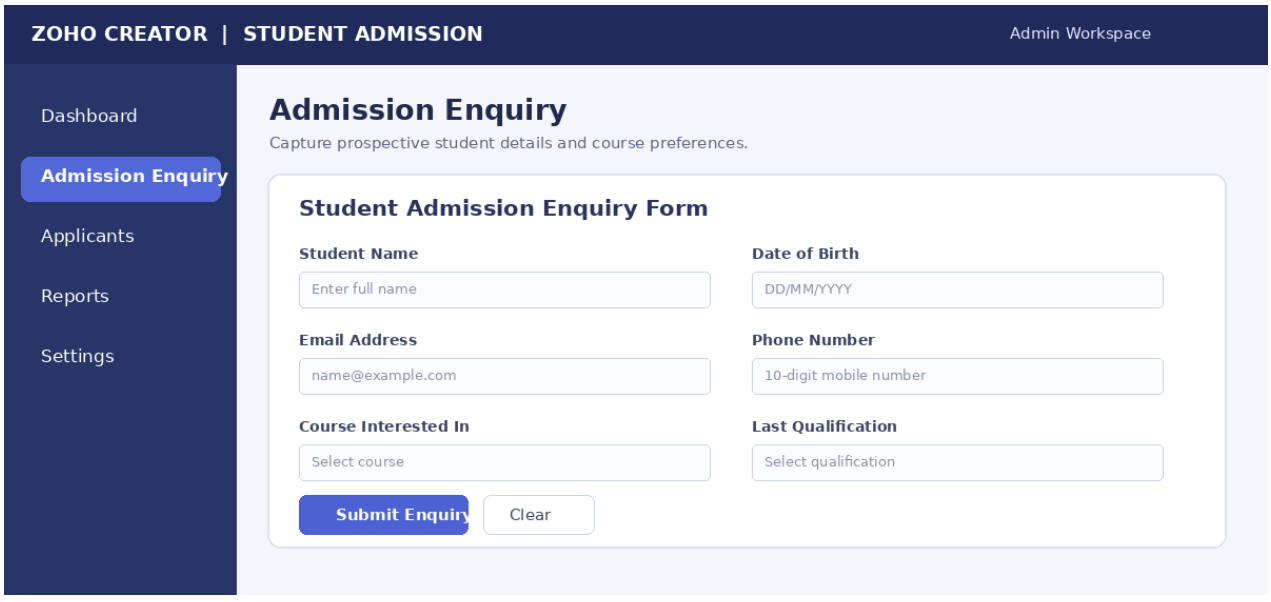

Figure 1: Sample Student Admission Enquiry form interface created for the application.

2. Procedure (Continued)

Step 4: Create an Enquiry Report. Add a report based on Student_Admission_Enquiry to list submitted records and show student name, preferred course, enquiry date, and current status.

Step 5: Organise the report. Set useful sorting and filtering options so staff can quickly identify new enquiries, contacted students, and follow-ups that are still pending.

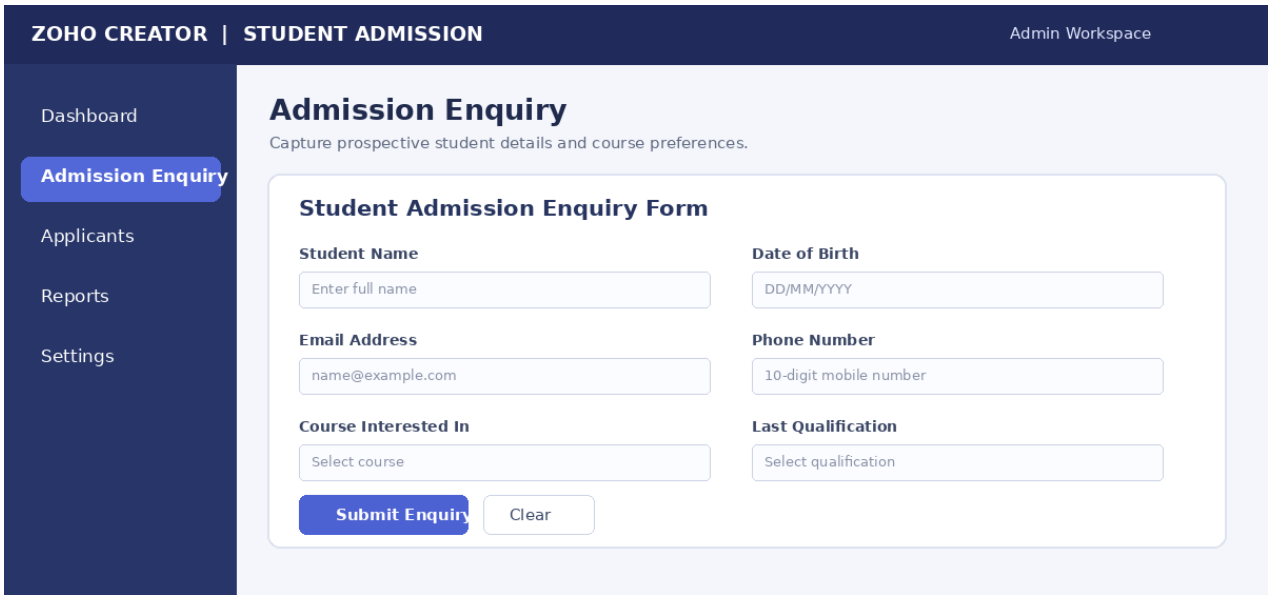

Step 6: Create a Follow-up Calendar. Add a calendar-style view using the follow-up or counselling date field, where available, so the admissions team can plan calls and counselling sessions.

Step 7: Open Page Builder. Create a custom page named Admissions Dashboard using Zoho Creator's UI Builder and arrange report, panel, and chart elements.

Step 8: Add summary panels and charts. Display total enquiries, new enquiries, follow-ups due, and a course-wise chart to summarise admission interest.

3. Output

3.1 Student Admission Enquiry Form

The form interface provides fields for capturing a prospective student's details and course preference. The Submit Enquiry action represents saving the completed enquiry as a record in the application.

3.2 Enquiry Report — Student_Admission_Enquiry

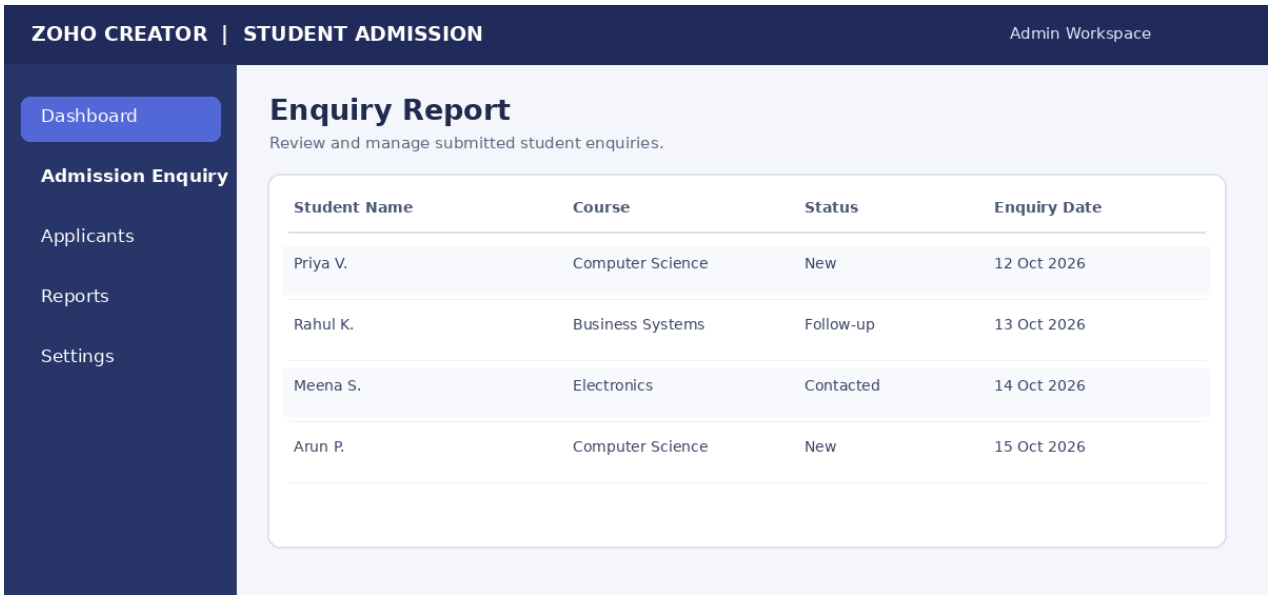

Figure 2: Sample report layout showing student name, course, enquiry status, and enquiry date.

The report brings submitted enquiries together in one view. Admissions staff can review the records, identify the course selected by each student, and track whether an enquiry is new, contacted, or awaiting follow-up.

Suggested report fields

Field	Purpose
Student Name	Identify the prospective student
Course Interested In	Understand course-wise demand
Enquiry Date	Review when the enquiry was received
Enquiry Status	Track progress and follow-up needs

24140 1009

3.3 Follow-up Calendar and Admissions Dashboard

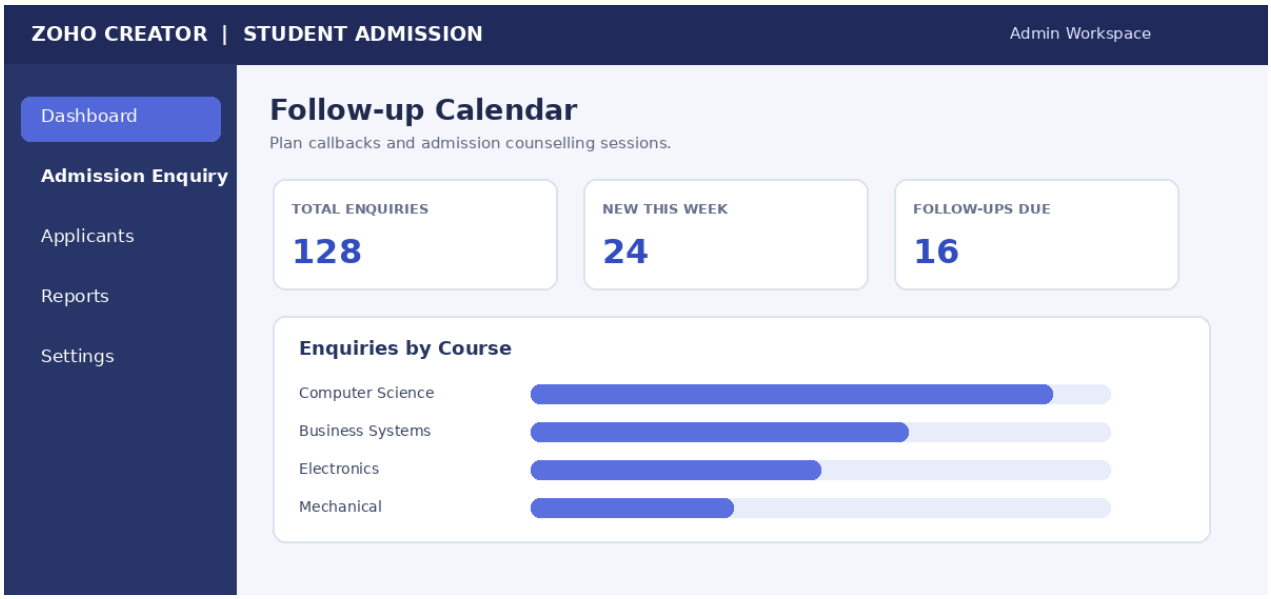

Figure 3: Dashboard-style layout used to illustrate enquiry volume and follow-up planning.

A calendar view can be configured to plot planned follow-up or counselling dates. The dashboard provides an at-a-glance summary of admission enquiries and course-wise interest. The values shown in these illustrative screens are sample data and should be replaced by live application data when connected to the form.

3.4 Admissions Dashboard — Page Builder

Figure 4: Sample Admissions Dashboard with summary panels and a course-wise chart.

3.5 Form Design and Data Organisation

The form should keep student information easy to enter and simple to maintain. Dropdowns help standardise repeated values, while status fields make it easier to manage follow-up activity.

Recommended fields

Field name	Field type / example
Student_Name	Single line — full name
Date_of_Birth	Date
Email_Address	Email
Phone_Number	Phone / single line
Address	Multi-line
Last_Qualification	Dropdown
Course_Interested_In	Dropdown
Enquiry_Date	Date
Enquiry_Status	Dropdown: New, Contacted, Follow-up, Closed
Follow_Up_Date	Date, if follow-up is required

241401009

Benefits of the proposed application

- Centralises student admission enquiries in one place.
- Improves consistency through mandatory fields and dropdown selections.
- Helps staff prioritise new enquiries and pending follow-ups.
- Makes course-wise enquiry patterns easier to review using reports and charts.
- Provides a clear dashboard for routine admission monitoring.

4. Final Result

The Student Admission Enquiry Form was designed as a structured low-code application concept in Zoho Creator. It captures prospective student details, contact information, previous qualification, and course preferences in a consistent format.

An enquiry report layout was prepared to review submitted records and track enquiry status. A follow-up calendar concept and an Admissions Dashboard layout were also included to support counselling schedules, summary metrics, and course-wise analysis.

The exercise demonstrates how Zoho Creator forms, reports, and UI Builder pages can be combined to organise admission enquiries without building a fully custom-coded application. The included interface images are illustrative mock-ups for documentation; live counts and records will depend on the actual data entered in Zoho Creator.

Figure 5: Overview of the proposed admissions dashboard.

Conclusion

The proposed Student Admission Enquiry application offers a simple and organised way to collect, review, and follow up on prospective student enquiries. Using forms, reports, and a dashboard helps the admissions team maintain records and monitor admission activity efficiently.
